HOMEWORK

# Web Accessibility (A11y)

Memory Match team project | Eric | Week 9

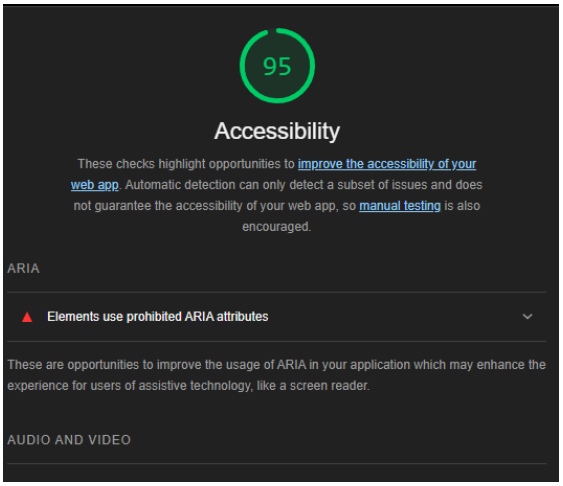

LIGHTHOUSE ACCESSIBILITY

**95** /100 before > **100** /100 after **+5 pts**

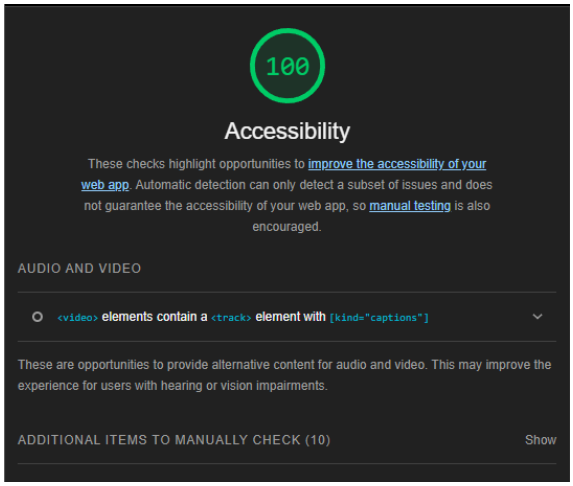

I tested our Memory Match website with Chrome Lighthouse. The first score was 95/100. After I made three accessibility changes, the score improved to 100/100.

## SCORE EVIDENCE

**BEFORE | 95 / 100**

**AFTER | 100 / 100**

## WHAT I CHANGED

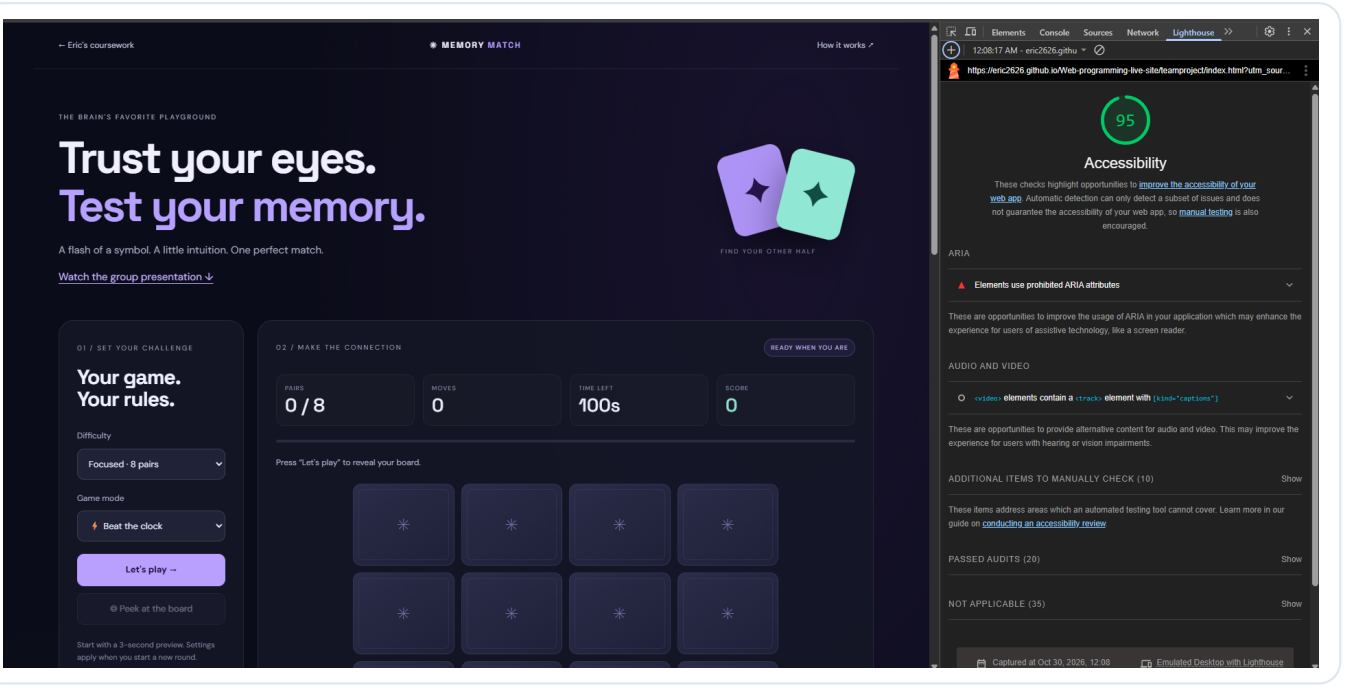

| | | |
|---|---|---|
| 01 | **ARIA role** | Added role="group" to the memory card board. |
| 02 | **Skip link** | Added a link to move straight to the main content. |
| 03 | **Text contrast** | Made small gray text brighter on the dark page. |

EVIDENCE

# Before and after screenshots

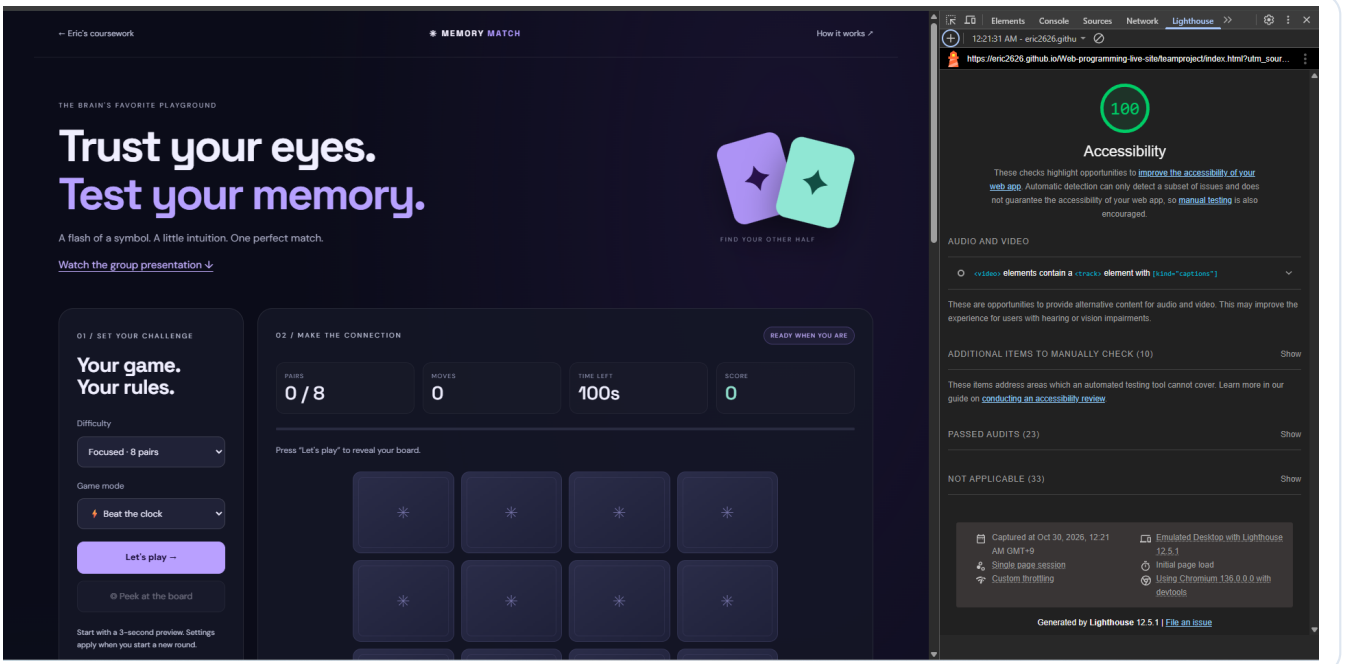

Both screenshots are from the Memory Match website and show its Lighthouse Accessibility results.

## BEFORE / 95 OUT OF 100

The first test showed an ARIA error on div#board.board. The board had an aria-label without a suitable role.

## AFTER / 100 OUT OF 100

CODE FIXES

# Three changes I made

Simple HTML and CSS changes in teamproject/index.html.

## 01 Fix the ARIA error

The memory board had a label, but it needed a group role. I added role="group".

BEFORE

```
<div id="board" class="board"
  aria-label="Memory cards"></div>
```

AFTER

```
<div id="board" class="board"
  role="group"
  aria-label="Memory cards"></div>
```

## 02 Add a skip link

I added a Skip to main content link. It becomes visible when a keyboard user presses Tab.

BEFORE

```
<body>
<header>...</header>
<main>...</main>
```

AFTER (HTML)

```
<body>
<a href="#main-content"
  class="skip-link">Skip to main content</a>
<main id="main-content" tabindex="-1">
```

## 03 Improve small text contrast

I changed the small gray text to a lighter color, so it is easier to read on the dark background.

BEFORE (CSS)

```
.arena-footer { color: #777e9e; }
footer { color: #747994; }
```

AFTER (CSS)

```
.eyebrow, .note,
 .arena-footer, footer {
  color: #bfc3d9;
}
```

RESULT

Lighthouse increased from 95 to 100. I learned that small changes in HTML and CSS can make a website easier to use for more people.

Note: Lighthouse also suggested video captions. A score of 100 does not mean every accessibility issue is solved, so manual keyboard and caption checks are still useful.
